## CS 189: Homewook 3

## Problem 1

- 1. (Code included).
- 2. My RSS value (computed in code again!) is 8.1761×1012
- 3. (In code): Look for figure 1.
- 4. (In code): Look for figure 2. This histogram represents
- a gaurean distribution with a mean centered around zero.

Problem 2:

where zin = yinf(zin) and f(x) = wTa

Now 
$$f(x) = \sum_{i} \omega_{i} x_{i}$$

$$Z = yf(x) = \sum_{i} \omega_{i} y_{x_{i}}$$

$$\frac{\partial z}{\partial w} = y^{T} X \qquad (1X \text{ feature}) \text{ vector }.$$

Lose 
$$log = log (l+e^{-z})$$
 [Putting rick for together]
$$\frac{\partial Loss}{\partial z} = \frac{-e^{-z}}{l+e^{-z}}$$
 (scalar) = A

$$\Rightarrow \Delta w_i = - \eta \left( \frac{\partial Loss}{\partial x} \right) \left( \frac{\partial x}{\partial w} \right) = + \eta A Y^T X$$

2.

continued to next page ..

$$R[\omega] = \sum_{i=1}^{n} log (He^{-y^{(i)}(\omega^{T}\chi^{(i)})})$$

$$\frac{\partial[\omega]}{\partial x_{i}} = \frac{\int_{i=1}^{n} log (He^{-y^{(i)}(\omega^{T}\chi^{(i)})}) (-y^{(i)}\omega^{(i)})}{(1+e^{-y^{(i)}(\omega^{T}\chi^{(i)})}) \times 1}$$

$$\frac{\partial R[\omega]}{\partial x_{i}\partial y_{i}} = \frac{\partial}{\partial y_{i}^{(i)}} \left[ \frac{f_{i}(-y^{(i)}\omega^{(i)})}{1+f} \right] \left[ f = \frac{Note}{e^{-y^{(i)}(\omega^{T}\chi^{(i)})}} \right]$$

$$= -uo^{(i)} - uo(i) \frac{\partial}{\partial y^{(i)}} \left( \frac{f_{i}y^{(i)}}{1+f} \right)$$

$$= -uo(i) \frac{\partial}{\partial y^{(i)}} \left[ (y_{i}+1)^{-1} + y_{i}^{(i)} \frac{\partial}{\partial y^{(i)}} (y_{i}+1)^{-1} \right]$$

$$= -uo(i) \frac{\partial}{\partial y^{(i)}} \left[ (y_{i}+1)^{-1} + y_{i}^{(i)} \frac{\partial}{\partial y^{(i)}} (y_{i}+1)^{-1} \right]$$

$$= -uo(i) \frac{\partial}{\partial y^{(i)}} \left[ (y_{i}+1)^{-1} + y_{i}^{(i)} \frac{\partial}{\partial y^{(i)}} (y_{i}+1)^{-1} \right]$$

$$= -uo(i) \frac{\partial}{\partial y^{(i)}} \left[ (y_{i}+1)^{-1} + y_{i}^{(i)} \frac{\partial}{\partial y^{(i)}} (y_{i}+1)^{-1} \right]$$

$$= -uo(i) \frac{\partial}{\partial y^{(i)}} \left[ (y_{i}+1)^{-1} + y_{i}^{(i)} \frac{\partial}{\partial y^{(i)}} (y_{i}+1)^{-1} \right]$$

$$= -uo(i) \frac{\partial}{\partial y^{(i)}} \left[ (y_{i}+1)^{-1} + y_{i}^{(i)} \frac{\partial}{\partial y^{(i)}} (y_{i}+1)^{-1} \right]$$

$$= -uo(i) \frac{\partial}{\partial y^{(i)}} \left[ (y_{i}+1)^{-1} + y_{i}^{(i)} \frac{\partial}{\partial y^{(i)}} (y_{i}+1)^{-1} \right]$$

$$= -uo(i) \frac{\partial}{\partial y^{(i)}} \left[ (y_{i}+1)^{-1} + y_{i}^{(i)} \frac{\partial}{\partial y^{(i)}} (y_{i}+1)^{-1} \right]$$

$$= -uo(i) \frac{\partial}{\partial y^{(i)}} \left[ (y_{i}+1)^{-1} + y_{i}^{(i)} \frac{\partial}{\partial y^{(i)}} (y_{i}+1)^{-1} \right]$$

$$= -uo(i) \frac{\partial}{\partial y^{(i)}} \left[ (y_{i}+1)^{-1} + y_{i}^{(i)} \frac{\partial}{\partial y^{(i)}} (y_{i}+1)^{-1} \right]$$

$$= -uo(i) \frac{\partial}{\partial y^{(i)}} \left[ (y_{i}+1)^{-1} + y_{i}^{(i)} \frac{\partial}{\partial y^{(i)}} (y_{i}+1)^{-1} \right]$$

$$= -uo(i) \frac{\partial}{\partial y^{(i)}} \left[ (y_{i}+1)^{-1} + y_{i}^{(i)} \frac{\partial}{\partial y^{(i)}} (y_{i}+1)^{-1} \right]$$

$$= -uo(i) \frac{\partial}{\partial y^{(i)}} \left[ (y_{i}+1)^{-1} + y_{i}^{(i)} \frac{\partial}{\partial y^{(i)}} (y_{i}+1)^{-1} \right]$$

$$= -uo(i) \frac{\partial}{\partial y^{(i)}} \left[ (y_{i}+1)^{-1} + y_{i}^{(i)} \frac{\partial}{\partial y^{(i)}} (y_{i}+1)^{-1} \right]$$

$$= -uo(i) \frac{\partial}{\partial y^{(i)}} \left[ (y_{i}+1)^{-1} + y_{i}^{(i)} \frac{\partial}{\partial y^{(i)}} (y_{i}+1)^{-1} \right]$$

$$= -uo(i) \frac{\partial}{\partial y^{(i)}} \left[ (y_{i}+1)^{-1} + y_{i}^{(i)} \frac{\partial}{\partial y^{(i)}} (y_{i}+1)^{-1} \right]$$

$$= -uo(i) \frac{\partial}{\partial y^{(i)}} \left[ (y_{i}+1)^{-1} + y_{i}^{(i)} \frac{\partial}{\partial y^{(i)}} (y_{i}+1)^{-1} \right]$$

$$= -uo(i) \frac{\partial}{\partial y^{(i)}} \left[ (y_{i}+1)^{-1} + y_{i}^{(i)} \frac{\partial}{\partial y^{(i)}} (y_{i}+1)^{-1$$

3. (a) 
$$\Rightarrow M^{(c)} = \begin{bmatrix} 0.9526 \\ 0.7311 \\ 0.2689 \\ 0.7311 \end{bmatrix}$$

(b)  $\omega^{(1)} = \begin{bmatrix} -2 \\ 6.2655 \\ 0 \end{bmatrix}$ 

(c)  $M^{(1)} = \begin{bmatrix} 1.0000 \\ 1.0000 \\ 0.0019 \\ 0.0139 \end{bmatrix}$ 

(d)  $\omega^{(2)} = \begin{bmatrix} -2 \\ 14.2025 \\ 0 \end{bmatrix}$ 

**Scanned by CamScanner** 

Problem 3

- 1. ( code attached): Plots (tigures (1), (2) & (3)).
- 2. (code attached): Plote (figures (4),(5), (6))
  We notice that while I could converge very quickly
  in batch gradient descent, it took me much longer
  for stochastic gradient descent.
- 3. The learning rate  $\eta \propto 1/t$  did help the convergence a lot. (Plots included) (figures (7), (8), (9)) \* This is visible more for  $\eta \propto 1/10^t$  more.

4. a) 
$$f(x) = \sum_{i=1}^{n} \alpha_i K(x^{(i)}, x)$$

$$K(x^{(i)}, x) = (x^T x^{(i)} + 1)^2$$

$$f(x) = \sum_{i} \varpi_i \Phi_i \Phi_i(x)$$

$$= \sum_{n} \alpha_n K(x^h, x).$$
similarly proceeding by Question  $\Im$ ,

where 
$$z^{(i)} = y^{(i)}f(x^{(i)})$$
.

$$\frac{\partial L}{\partial \alpha_i} = \sum_{i=1}^{n} \frac{\partial}{\partial \alpha_i} \left( \sum_{i=1}^{n} \log(1 + e^{-z^{(i)}}) \right)$$

$$= \sum_{i=1}^{n} \frac{\partial}{\partial \alpha_i} \left( \sum_{i=1}^{n} \log(1 + e^{-z^{(i)}}) \right)$$

$$= \sum_{i=1}^{n} \frac{e^{-z^{(i)}}}{1 + e^{-z^{(i)}}} \frac{\partial}{\partial \alpha_i} (f(x^{(i)}))$$

$$= -\frac{e^{-z^{(i)}}}{1 + e^{-z^{(i)}}} y^{(i)} K(x^{(i)}, x)$$

$$= \sum_{i=1}^{n} \frac{e^{-z^{(i)}}}{1 + e^{-z^{(i)}}} y^{(i)} K(x^{(i)}, x)$$
which is different from our answer.

(b) Code is present. Generates 3 graphs. fig 10: training\_risk fig 11: testr validation\_risk fig 12: difference (hopefully close to 0).

(C) The quadratic kernel overfity compared to linear kernel. I found that as I change of, so to a certain point, there was bad fit but when I increase a bit, I get a better fit.

0

Problem 4: :-

Ig feel that this may have happened because of I reasons.

1. Daniel overcomplicated his model thus make it overfit data: during A/B testing.

2. Daniel forgot to account for noise. \$3. used milliseconds thus overfitting

We to could use a quadratic/linear kernel to count the number of 30 & minute intervals between midnight. Also use a gaussean noise filter to oremove the good emils emails from the previous day (in a different

Twould also sheek to find the emaile
